

EZ-TUNE PUNCHDOWN TOOL

Platinum Tools announces another innovation in punchdown tool technology. The patented EZ-Tune Termination Tool (Cat. No. 13200) is designed to fine-tune the termination forces to insure perfect connections especially in sensitive Category 6 environments. The tools infinitely adjustable and lockable impact force guarantees every technician applies optimal pressure during termination to reduce equipment failures and increase system performance. Tools

can be set to the equipment manufacturer's recommended pressures instead of the traditional tool default impact forces. Management can adjust each technician's tool to assure a production floor level of quality control in a field environment.

"Traditional tools have a low and high setting only," says Lee Sachs, president and GM, Platinum Tools, Inc. "The EZ-Tune provides the ability to "fine-tune" the forces applied to terminations in both field and production environments. This is the only tool on the market that assures repeatable

and precise terminations so equipment is not damaged and the wire seats in the sweet spot of the contact for maximum system headroom." ■
